# Ventum II
# Heat Powered Stove Fan

## FIR362

The new twin blade fan, specially designed for small stove tops and restricted spaces, packs a mighty punch; don't be deceived by its diminutive size, sitting at just 174mm high, our Ventum II fan operates at low temperatures and really blows hot air – FACT.

The innovative ultra-scoop twin propeller design boasts an advanced radiating fin specific for this model to generate maximum airflow. Designed to start at a temperature as low as 45°C, the fan requires no batteries or external power. Heat is conducted though the base of the fan and converted to electricity which powers the fan motor. With a durable, hard wearing black anodised finish, the fan automatically slows and stops as the heat from the stove reduces.

- Compact design: only 174mm high to fit tight, restricted spaces
- Ultra low 45°C starting temperature – perfect for early starting*
- Terrific air flow for a fan of this size – blows up to 550feet/minute
- Thermally controlled actuator for optimum Peltier performance
- Dynamically balanced fan for unrivalled motor life, balance & output

* Under test conditions. Actual starting temperature varies according to stove, installation and environment.

**Specifications:**

Height (including blade).....174mm

Width (including blade).....155mm

Depth .....106mm

Base plate width.....110mm

Weight.....475g

- Easy starting at 45°C (113°F)
- Maximum operating temperature 320°C (600°F)
- Optimum operating temperature range 80 - 250°C (175 – 480°F)
- Inbuilt protection system to stop the fan overheating
- 24 months materials & workmanship guarantee
- Designed & engineered in the UK
